EXFS Vault

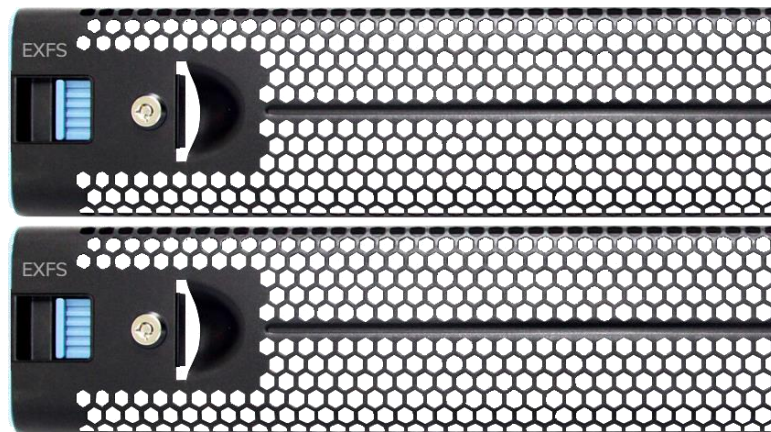

Cyber Recovery made Easy

EXFS Vault

EXFS Vault arms organizations against unexpected system downtime and/or encrypted data due to cyber-attacks.

As cyber threats become increasingly sophisticated, it is critical for organizations to focus on building true cyber resilience. Many companies still rely heavily on traditional security measures such as firewalls, antivirus software, and access controls. While these are important, they represent only one part of a comprehensive cyber resilience strategy.

True cyber resilience goes beyond prevention

A backup and recovery strategy is not a 'nice to have' - it is a fundamental pillar of any organization's cyber resilience approach. Without reliable and isolated backup and recovery solutions, organizations risk losing critical business data permanently - especially in the event of a ransomware attack where prevention fails.

Excepta offers a unique solution for this: EXFS Vault.

EXFS Vault is a highly secure, isolated environment that operates independently from primary backup and recovery systems. In a worst-case scenario where both production systems and primary backups are compromised - EXFS Vault provides a safe, untouched copy of your data. This enables organizations to recover quickly and resume operations, even after a large-scale attack or major outage.

Be ready

Cyber resilience is more than just protection. It requires a holistic approach where prevention, detection, and recovery work together seamlessly. By implementing EXFS Vault, your organization significantly increases its resilience and is truly prepared for any cyber incident.

Benefits for your organization

Maximum protection against today's cyber threats

EXFS Vault offers exceptional security, purpose-built for today's reality.

Where traditional backup and recovery solutions fall short, EXFS Vault delivers Enterprise-grade firewalls, deep-layered security, and Out-of-Band management. This means that even if your organization's network is compromised, the Vault remains untouched and completely inaccessible to attackers.

24/7 detection and response - even before damage occur

Cyberattacks don't wait and neither does Excepta. Through seamless integration with our Managed Detection & Response (MDR) platform, the entire environment is continuously monitored. From data streams to infrastructure, operating systems, and applications: anomalies are identified and addressed in real time - before they can cause any damage.

Certainty of recovery - even in the face of large-scale attacks

With EXFS Vault, recovery data isn't just stored - it's securely replicated and isolated from your primary infrastructure.

Even in the event of a major cyberattack, your recovery points remain intact and ready for immediate use, ensuring your organization can return to full operations without delay.

Realistic recovery tests in a secure environment

Theoretical plans are not enough. EXFS Vault includes a fully isolated testing network, allowing realistic recovery scenarios to be executed safely. Your IT team can validate and refine recovery strategies in a controlled environment without any risk to live systems.

War-room readiness: recovery in the heat of battle

In a cyber crisis, every second counts. EXFS Vault empowers organizations to instantly relaunch essential production systems in a dedicated war-room setup.

This ensures business continuity even when the stakes are at their highest.

EXFS Vault

Key features

Ultra-secure data vault – Designed with security at its core

EXFS Vault was built with one clear purpose: maximum protection. Combining Enterprise-grade firewalls, Multi-Factor Authentication, advanced threat detection, and network segmentation, this solution creates a rock-solid defense wall against today's most sophisticated cyberattacks.

Enterprise components – proven technology

EXFS Vault is composed of carefully selected hardware and software components that have proven their reliability in the most demanding Enterprise environments. The result: unmatched stability and broad integration capabilities.

Robust security – State-of-the-art and always monitored

Security doesn't stop at deployment. EXFS Vault is equipped with cutting-edge security tools and is continuously monitored through professional SOC services. This ensures that all systems, processes, and environments connected to EXFS Vault remain secure and under constant surveillance.

Scalable architecture – Built to grow with you

Thanks to its modular design, EXFS Vault can be easily scaled. Add capacity or functionality as your organization evolves - without compromising the stability of your core infrastructure.

Purpose-Built for cyber recovery

EXFS Vault isn't a generic IT solution - it's purpose-built for one mission: protect your organization and enable fast, secure recovery during a cyber crisis. Every component is designed, managed, and maintained to fulfill this role without compromise.

High availability – always ready to recover

With built-in hypervisors and instantly deployable standby resources, EXFS Vault ensures rapid recovery of mission-critical systems. Downtime is kept to an absolute minimum even in the event of major disruption.

NIS2 compliance – A head start on cyber resilience

EXFS Vault instantly elevates your organization's cyber resilience, providing a solid foundation for NIS2 compliance. With critical data and system recovery securely covered, you can move forward with full confidence.

EXFS Vault

Conclusion

With Excepta's EXFS Vault, your organization is not only prepared for the unexpected - it also has a powerful tool to recover quickly and resume business operations without delay.

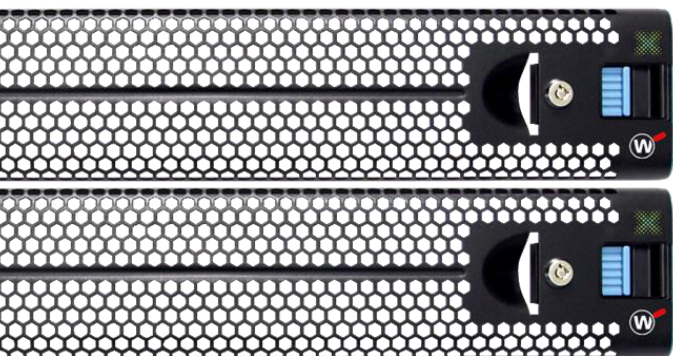

Invest in a solution that goes beyond traditional backup and recovery. EXFS Vault delivers the resilience your organization needs to thrive in today's digital landscape.

About excepta

Excepta is the specialist in cybercrime-resistant backup and recovery solutions. With innovative solutions such as EXFS Vault and exceptional services in DCS, we provide organizations with complete data continuity and protection against digital threats. People, processes and technology are at the core of our approach.

Our exceptional services combine proven technologies, professional support and a sharp focus on recoverability. Organizations can count on excepta as a recognized specialist in cyber resilience, so they can continue to do business with calculated risk and with certainty.

We are exceptionally down-to-earth, ambitious and full of passion; we are excepta!

Prepare for the worst,
relax with the best
